

# ER MODEL DIAGRAM

## SMALL CHANGES FOR PHASE 1

We changed the names of key attributes of some entities. Like ID, names are changed to C-ID, T-ID, and so on.

- 1) Eg: if the entity is Team and attribute is the ID we changed the attribute name to T-ID

(Well the reason is that in the textbook almost all the attributes names are shown as duplicates. But we figured out that it would be a mess while assigning foreign keys and all... So we changed them :) )

- 2) We didn't mention the corresponding orders of ratios in relationship type constraints. We rectified them using (min, max) constraints instead of ratios.
